

## Improve an existing lawn

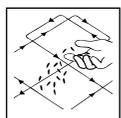

### Low mowing

The first step is to closely mow the lawn. Choose a time when the grass is not damp. Remove all clippings after mowing.

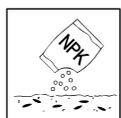

### Rake the lawn

Rake the lawn to remove and break up dead matted grass or thatch.

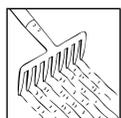

### Sow the seed

Select a suitable **Turflin**<sup>®</sup> mixture. Grass Fix is a good choice for overseeding. Sow in two directions.

### Feed the lawn

Feed the lawn with a quality fertiliser containing N, P and K. High amount of nitrogen in spring and low nitrogen in autumn.

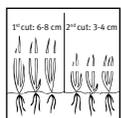

### Rake the lawn

Rake the area so that the seed and fertiliser come into contact with moisture to improve germination. Lightly roll if possible.

### Irrigate the lawn

Make sure the seedbed is constantly moist. After establishment irrigation should be restricted. Water between 30-40 mm at a time to ensure a deeper root system.

### Mow the lawn

The first mowing should not be done in a lower height than 6-8 cm. Trim lightly and gradually lower blades to an ideal cutting height of 3-4 cm.

# Turflin<sup>®</sup> ...the garden owner's favourite

If you are aiming for a perfect lawn, e.g. a wear tolerant, a drought tolerant or perhaps a low growing, dense lawn you will find a mixture within the Turflin<sup>®</sup> range that suits exactly your needs. The high standards for Turflin<sup>®</sup> lawn quality and appearance are the result of innovation and careful development of each mixture.

The grass seed is proved and tested under local climatic condition and is of the highest certified European quality.

TURFLINE<sup>®</sup>  
User's guide

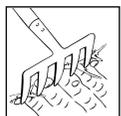

## Establishment of a new lawn

### Prepare the ground

Prepare the ground by digging or by using a rotavator. Level the ground if needed. The better the seedbed is prepared, the better the lawn will be. Good drainage is important and deep digging will help.

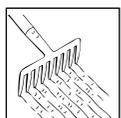

### Rake the ground

Rake the ground. Roll or tread the soil and rake again. Finally, add fertiliser and rake to stimulate the establishment and root development.

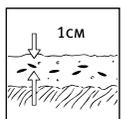

### Sow the seed

Select a mixture from the **Turfline®** range. The mixtures can be sown any time from spring to early autumn. Sow in two directions for an even spread.

### Cover the seed

Rake the soil again in order to get the seed covered. On sandy soils roll the soil after raking.

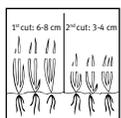

### Sowing depth

To ensure germination and establishment the perfect sowing depth is 1 cm.

### Irrigate

During dry periods, keep the seedbed moist by watering with a fine spray.

### Mow the lawn

The first mowing should not be done in a lower height than 6-8 cm. Trim lightly and gradually lower blades to an ideal cutting height of 3-4 cm.

### Sowing tips

Sowing rate for all mixtures is approx. 1 kg/30-40 m<sup>2</sup>. For best result, sow mixtures in early spring, late summer or early autumn.

### SeedBooster®

The new super-efficient seed coating. SeedBooster® feeds the seed, not the weed – it is the number-one fertilizer for fast establishment. The coating increase the weight of each seed which gives a better seed-to-soil contact and makes sowing easier. Seedbooster® is only available from DLF.

### Quick Action®

Quick Action® is enhanced grass that provides fast and strong establishment at soil temperatures as low as 3°C. It has extra wear and drought tolerance and increased disease resistance. Quick Action® is only available from DLF.
